

Coupling to other religions

Cross-conversion: $B_r, M_r \to B_\ell$ or M_ℓ at hazard λ_ℓ; $\quad \ell \neq r$.
Destination roles are selected with probabilities $1 - q_\ell$ and q_ℓ.

Schism: $M_r \to M_\ell$ at hazard $\nu_{r\ell}$. No direct cross-conversion of P_r.

Demography: births bX and deaths μX in every compartment X.
